

Sebastian O Rodriguez

sebastian@guavaai.ai · github.com/Sebastian-O-Rodriguez · linkedin.com/in/sebastianorodriguez

Summary

Software engineer and founder building production AI systems across agent orchestration, analytics, and business operations. I work across full-stack software, AI infrastructure, and the control systems required to make autonomous systems reliable.

Experience

Guava AI · Founder & Full-Stack Engineer

2025–Present · Remote/Caribbean

- Build and ship production AI systems for business operations, from client workflows and data integrations to agent orchestration and analytics platforms.
- Built Guava OS, a control plane for parallel AI coding agents with dependency-aware execution, isolated worktrees, MCP tool routing, review gates, and an evaluation harness backed by 258 tests.
- Built Guava BI, a multi-tenant analytics system that places deterministic computation behind an LLM trust boundary, backed by 514 tests.
- Own delivery end-to-end across TypeScript, Python, FastAPI, Next.js, and PostgreSQL, from requirements and diagnostics through architecture, testing, observability, deployment, and client delivery.

Scale AI · Strategic Projects

2022–2024 · Remote/NYC

- Led text and multimodal data-labeling operations, raising queue quality from 25% to 75% in 4 days and scaling daily production from 250 to 25,000+.
- Built an onboarding funnel producing 250+ qualified hires while managing 50+ operators.

Salesforce · Technical Writer

2020–2022 · Remote/NYC

- Launched an elastic services product with a 3-person team and owned product documentation, API reference documentation, and the internal knowledge base.

Projects

Guava OS · Agent Orchestration Platform

Control plane for parallel AI coding agents that separates autonomous execution from delivery authority through dependency-aware tasks, isolated worktrees, deterministic checks, and human review gates. TypeScript.

Guava BI · Multi-Tenant Analytics

Natural-language analytics system that uses AI to interpret business questions while deterministic code computes auditable metrics across tenant-isolated operational data.

RoutineMe · AI-Native Health Tracker

Translates natural-language and image input into structured proposals before committing state through typed, deterministic execution. Includes RAG-grounded nutrition estimation, per-call AI observability, a bounded 3-step agent loop, RLS, and golden-set evaluations reaching 100% on a live OpenRouter run.

PMLaD · Multi-Tenant Property Operations Platform

Connects property workflows through a shared domain model with PostgreSQL Row Level Security enforcing tenant isolation. Uses FORCE RLS and boot-time verification, with staged Azure deployment gated on 80%+ coverage and Playwright end-to-end tests.

Technical Skills

Languages: TypeScript, Python, SQL, JavaScript

AI Systems: LLM evaluations, RAG, pgvector, MCP, agent orchestration, Langfuse

Backend & Data: Node.js, FastAPI, NestJS, PostgreSQL, Prisma, Supabase

Frontend: React, Next.js, React Native, Astro

Infrastructure: AWS, Azure, Docker, Kubernetes, GitHub Actions

Education

Carnegie Mellon University

2020

BS Technology & Sonic Product Innovation · Minor in Business Administration
